

# Supplier Onboarding Project – Customer X

Malik Sogukoglu - Onedot applicant 😊

# Who are we?

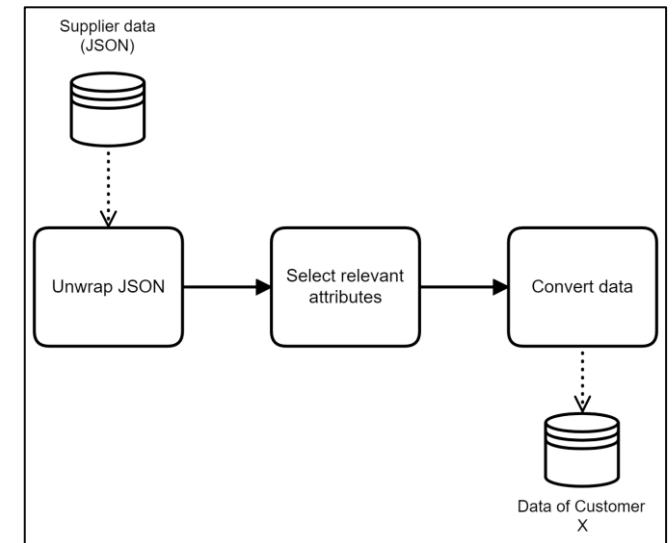

- **Onedot:** Swiss start-up, founded in 2016
- Develop **product data platform**
- Creating data pipelines between **suppliers** and **customers** of various industries
- Use of **state-of-the-art technologies** and methods
  - incl. AI, Cloud and process automation

# What was the initial situation and the goal?

- **Customer X:** e-commerce onlineshop
- Customer X buys cars → and then rents / sells them
- Has new supplier → to be **onboarded**
- **Data transfer** with ensuring data quality to be performed!

# What have we done?

- Data successfully transferred 🧐👉
- Dataset increased from **7252 rows** to **8405 rows**
- Automated data pipeline
  - Supplier data (JSON) rolled up
  - Relevant attributes of the supplier data selected; others discarded
  - Conversion carried out:
    - "... l/km" **car consumption** → "consumption is measured by l/km"
    - German **car color** names → English car color names
    - Etc.
  - Supplier data loaded into Customer X data-format

# What could we do next?

- Conversions to do:
  - **Car condition** more fine-grained at X → discuss it
    - Question e.g., is “Occasion” = “Used” or “Used with Guarantee”
  - **Car types**: Supplier car types ≠ Customer X car types → discuss it
- Supplier only knows **city** → find **zip** and **country** via **online service**

What  
technology  
did we use?

# Prices

- This introductory project was free of charge! 😊
- **Next onboarding steps: CHF 30'000 / month**
  - Includes...
  - Data storage in the cloud
  - Development of data pipelines
  - (Automated) data processing

# Closing and question session
